

PRESS RELEASE

25. August 2022

Pilkington fire protection at InnoTrans 2022

Meet us from 20 - 23 September 2022 at InnoTrans in Berlin, the leading international trade fair for transport technology. The Pilkington fire protection glass team will be there with its own stand in Hall 1.1.

At our stand we will be presenting our Pilkington **Pyrostop**[®] R, Pilkington **Pyrodur**[®] R and Pilkington **Pyroclear**[®] R fire-resistant glasses, which are used in rail-bound vehicles. These are often provided with additional screen printings, scratch protection films or similar and must be proven for various internationally different test requirements.

As a special novelty, we have had a large number of our products tested according to EN 45545-2 with regard to their hazard level in case of fire.

All tested products achieved the highest class HL 3, as they make only a very small contribution to the spread of fire, cause only a low rate of heat release in the event of fire, as well as low smoke toxicity and smoke density.

You will find us in hall 1.1 at stand 120 - We are looking forward to your visit!

You can find more information about the trade fair at www.innotrans.de
